Mathematica Network Installation

This Mathematica installation method is for UMBC-owned computers that remain on campus, since activating this way requires the computer to be connected to the campus network. For computers that may not always be on campus (like laptops) or not always connected to the campus network, install Mathematica using the Stand-Alone installation instructions.

1. Install Mathematica (For Mac, follow steps 1-5 of these instructions. For Windows, follow steps 1-7 of these instructions).

2. When Mathematica first launches, click Other ways to activate.

3. Click Connect to a network license server.
4. Type in license5.umbc.edu and then click Activate to activate Mathematica.
