Reactivating MATLAB

For lab installations:
Lab installations of MATLAB automatically remain active via our central license server. If you receive licensing related errors on your lab installation of MATLAB, please make sure you are either connected to the campus network or the UMBC VPN.

For stand-alone installations:
Stand-alone installations of MATLAB will need to be reactivated with a UMBC MathWorks account once per year. If you do not already have a UMBC MathWorks account, you will first need to create one in order to proceed with reactivating MATLAB (NOTE: You will need to use your UMBC email address when creating your MathWorks account). To re-activate your stand-alone install of MATLAB, please follow the instructions below (NOTE: If the license has already expired, skip step 2 and then proceed directly to step 3):

1. Open MATLAB.
2. Go to the Help Menu and then select Licensing.
3. Click on Activate Software.
4. Select Activate using Internet.
5. Restart MATLAB for it to recognize the updated license.
