**Procedures - Processing New Books**

When books arrive from Cataloging, place them on the "NEW BOOKS TO PROCESS" shelf. When ready to process, retrieve books from that shelf and follow these procedures:

**Stamping:**
- We use archival ink that we acquire from the Library of Congress (which is located in Room 110 in the office supply cabinet).
- Use the smallest of the three stamps with the circular Library logo on it.
- Choose from one of the few beginning pages of the book, ideally after the title page and on the second page of the first chapter, but primarily a page with only print. If there are mostly images, please see a supervisor for advice about stamping.
  - Please don’t stamp artists’ books.
- Test the stamp out on a piece of scrap paper.
- Stamp the book as close to the gutter as possible, preferably at the bottom of the right page.
- Blot the stamp with a scrap piece of paper before you close the book to ensure the ink is dry and will not smudge the other page.
- If the book is mostly photographs or full bleed images, please see the librarian or chief curator for guidance.

**Mylarizing: Covering the dustjacket/book jacket:**
- Any book that has a book jacket requires a pH neutral Mylar cover.

**Materials**
- Mylar sleeves, held in flat boxes: usually located in Room 103 in drawer #19, with the label “Book Covering Materials”.
- Mylar roll, held in a rectangular cardboard box: usually located in Room 103, sometimes in the back right corner.
- Scissors and bone tool: located in Room 110 in the office supply cabinet

<table>
<thead>
<tr>
<th>Image 1: Select a piece of Mylar that is larger than the dust-jacket you are covering.</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Image 2: If the pre-cut Mylar sleeves are too small, cut a larger one from a roll of Mylar. (Located with the boxes of pre-cut Mylar sleeves in Room 103.)</td>
<td></td>
</tr>
<tr>
<td>Image 3: All of the Mylar comes with a pre-creased side; put this creased side closest to you and facing up.</td>
<td></td>
</tr>
<tr>
<td>Image 4: Remove the dust-jacket from the book and set aside the book.</td>
<td></td>
</tr>
<tr>
<td>Image 5: Set the dustjacket, with the inside facing you, on top of the Mylar.</td>
<td></td>
</tr>
<tr>
<td>Image 6: Using the bone tool, gently soften the dust-jacket's creases—this will make the Mylarizing process easier.</td>
<td></td>
</tr>
</tbody>
</table>

Don't press too hard on the book creases.
- Insert the bottom edge of the dustjacket into the pre-creased section of the Mylar.

- Secure the dust-jacket with one hand, and fold the top section of Mylar down and over the dust-jacket.

- Using the bone tool, crease the top fold you just made. Careful not to crease the dust-jacket itself!

- Look at the sides of the width where the flaps of the book jacket are located; if the Mylar is too long on the sides, trim the excess.

- Place the book inside its newly covered jacket; set the spine in the center of the covered dust-jacket, and carefully place the entire cover onto the book, one side at a time.
Check the UMBC Library catalog to make sure that the information is correct:

- Go to Advanced Search.
- Choose UMBC as the campus.
- Do a LC call number search.
- Ensure that the record for Special Collections matches the typed tag with the materials and the book in hand.

Check the book for any inscription, such as the author’s signature

- If it is signed by the author, check in the OPAC to make sure that there is a note in the catalog record
  
  - CLICK ON "AVAILABILITY" TO SEE IF THERE ARE ANY NOTES

Shelve the book in its proper location
