How do I export a TurningPoint Cloud session to the Blackboard Grade Center?

In order for the users to be able to send session grades to Blackboard, they must have the latest version of TurningPoint Cloud installed on their computers.

- PC Version (7.5.8.4)
- Mac Version (7.5.5.3)

Tell Me

1. Close out of your polling software you were using to cue up the TurningPoint Cloud Dashboard.

2. In the dashboard, select Manage tab.

3. Select the appropriate Participant List for the course, then click Results Manager.
4. Click the Integrations tab.
5. Select the Integration, which is Blackboard SSO
6. Enter server address: https://blackboard.umbc.edu

7. Click Connect
8. Click on the log in to Blackboard/myUMBC button.
9. Enter in your myUMBC user name and password and click Log In (Users that have Duo enabled on their accounts will need to grant permission for log in at this step.)
10. Click Finalize Connection at the bottom right hand side of the screen.
11. Select Export Session.
12. Select the session(s) you want to export.
13. Click Export.

Note: the three options at the bottom of the session list appear automatically (Total Performance; Attendance; and Total Points). By selecting any one of them, TurningPoint will automatically create a column in the Blackboard Grade Center and populate it with relevant data--attendance, point totals, etc. It is worth noting that every new session you export will create a new column in the Blackboard Grade Center.
