Can students use mobile devices and hardware clickers in the same class?

Yes, students can participate using either a mobile device or a hardware clicker if both options are enabled by the instructor. The instructor will need to enable Mobile Responses to generate a Session ID for those participating with their mobile devices and will also need to ensure a receiver is plugged into their computer on the correct channel for those participating with a clicker. A student cannot participate using two devices at the same time. The student must participate in the poll using either a clicker or a mobile device depending on the available option.
