How do I know what clicker receiver channel to use?

Tell Me

 Receivers have a range of 250 feet and will interfere with other receivers on the same channel within their range. If in a lecture hall, the channel number will be posted on the PC monitor. A sign indicating the channel number will also be posted facing the students. If you plan to use your own computer and TurningPoint receiver please change the channel to another value.

⚠️ Instructors using their own receiver and laptop should select a channel in the 74-82 range.
