How do I access someone’s profile with profile sharing?

Tell Me

In order to access someone’s profile, first they need to share their profile with you and you need to accept the invitation. Ensure those steps are done before continuing.

1. Visit my.umbc.edu and click Log In in the upper right.
2. On the right side of the login page, click on the same service you used to originally accept the profile invitation.
3. Log in through that service if you are not already.
4. In the main menu, click on the People link to view all people who have shared their profile with you.
