What browser works best with UMBC's Blackboard system?

Tell Me

Please review Blackboard's supported browser information and browser support process.

Other recommendations:

- Disable any "pop-up blocker" software that you have installed on your computer. Review this FAQ -> How to disable pop-up blockers on your Internet browser?
  - Specifically: If you use Chrome as your primary browser to access Blackboard, please make sure you allow Chrome to open pop-ups. By default, pop-ups are blocked, but Blackboard needs to open windows.
    - You may see a message in the address bar: Pop-up blocked
      - Click the link for the pop-up window you'd like to see.
    - To always see pop-ups for the site, select Always allow pop-ups from [site] Done.
    - Add blackboard.umbc.edu and [*].blackboard.com to the approved list for Chrome pop-ups.

- Keep your virus software updated in order to scan for the latest viruses.

- If you access from work or have a DSL connection and are running firewall software, you may experience difficulties. You will need to discuss this with your network security employees. They may or may not be able to allow access to the course, depending on their policies. DSL users will need to disable their firewall while using the chat tool (refer to the documentation in your firewall software for temporarily disabling the firewall).

- If you use a public computer lab or library, you need to exit the browser completely when you are finished. (That is, all windows must be closed or exited.) This clears your username/password. If you do not exit the browser completely, the next user will have access to your course account.

- Clear Your Browser's Cache. You may want to clear out the files stored in your cache to free up some space on your computer. This is called clearing the cache.
