How do I rename a page in Confluence wiki?

Tell me

As with naming pages, the name of page must be unique within its own space. Once you rename a page, Confluence automatically updates all the links to and from the page.

1. Go to the page and click the Edit link. If you do NOT see this link, you do not have sufficient privileges to make edits on a page.
2. Go to the page title area of the page and change the title.
3. Click the Update button.
