How do I request remote session for technical support?

Show Me

Tell Me

A remote session allows technology support staff to connect to your computer and correct any problems directly. Before following the steps below, the support staff must initiate the session and you must have an Internet connection.

1. Go to http://remote.umbc.edu
2. Enter the invitation code provided by the technology support staff.
3. Click Allow session when prompted.

Please note, Mac users may need to enable Screen Recording and Accessibility access for the ConnectWise application in Security & Privacy settings in System Preferences for the app to function fully.
