What is the purpose for the "Remember me for 30 days" option in Duo?

Checking the "Remember this device for 30 days" checkbox will cause your browser to remember your authentication information for a 30 day period. If you have your browser set up so it clears your cache after exiting, your authentication information will not be saved and you will have to authenticate every time you login.

Note: The "remember me" selection will not be honored if your browser blocks 3rd-party cookies.

The "Remember me for 30 days" selection should NEVER be set on a public access computer, such as a library or conference room computer.
