How do I enable Respondus Lockdown Browser for Chromebook?

Tell Me

1. Access your Original course.
2. Go to the Control Panel.
3. Expand Course Tools.
4. Select Respondus Lockdown Browser to open the Dashboard.
5. Expand Advanced Settings.
6. Select the option to Allow students to use LockDown Browser for Chromebook.

If the instructor allows an exam to use the Chromebook version of LockDown Browser, it will automatically launch LockDown Browser at the appropriate time. Students using a Chromebook will need to use the regular LockDown Browser installation link for UMBC. The installation link will take them to the Chrome web store, at which point they should select “Add to Chrome” to install the LockDown Browser Extension.

Limitations and/or known issues with LockDown Browser for Chromebook (beta):

- Quiz passwords aren’t currently supported
- The “Early Exit” feature in LockDown Browser isn’t currently supported
- LockDown Browser’s Calculator and Spreadsheet features aren’t currently supported
- The extended keyboard functions (for adding symbols and special characters) isn’t currently available
- LockDown Browser’s “Help Center” is currently unavailable

To report a bug/issue with the Chromebook beta, please open a support ticket at www.respondus.com/support. Be sure to indicate you are using LockDown Browser for Chromebook.
